Miniature DeltaTron® Accelerometers Types 4507 and 4508 consist of a ThetaShear® accelerometer and a DeltaTron preamplifier in a lightweight titanium housing with integrated 10−32 UNF connectors. Types 4507 C and 4508 C are similar to the DeltaTron accelerometers but come without the preamplifier.

USES AND FEATURES

USES
• Modal measurements for automotive body and power-train applications
• Multichannel modal analysis measurements
• Structural analysis measurements

FEATURES
• Robust titanium housing with integrated titanium connector
• Easily fitted to different test objects using a selection of mounting clips
• Low-weight ThetaShear design giving high sensitivity/weight ratio and very low sensitivity to environmental factors
• Triaxial mounting facility

DeltaTron Accelerometers
• Connect directly to DeltaTron power supply (ICP® compatible). The DeltaTron principle allows the use of inexpensive cables. Low output impedance so that long cables can be used
• Built-in, low-noise preamplifiers with ASICs give more than 100 dB dynamic range
• Choice of sensitivities from 10 mV/g to 1 V/g
• ID (TEDS) “Smart Transducer Interface” IEEE – P1451.4 (Types 4507 B and 4508 B)

Charge Accelerometers (4507 C and 4508 C)
• Sensitivity 5 pC/g
• Operating temperature up to 250°C (482°F)
Description

Miniature DeltaTron Accelerometers Types 4507 and 4508 are specifically designed to withstand the rough environment of the automotive industry. A combination of high sensitivity, low mass and small physical dimensions make them ideal for modal measurements, such as automotive body and power-train measurements, as well as for modal analysis on aircraft, trains and satellites. The main difference between the two Types is the position of the coaxial connector which is on the top surface perpendicular to the main axis for Type 4508 (top-mounted connector), and on the side surface parallel to the main axis for Type 4507 (side-mounted connector).

Design

Fig. 1
Exploded view of Miniature DeltaTron Accelerometer Type 4508 (top mounted connector) showing the ThetaShear design and the built-in DeltaTron preamplifier

The 10–32 UNF connector (1) is an integrated part of the top piece (2), which also contains the preamplifier (3) (not 4507 C or 4508 C). The slotted cylindrical stanchion holds a central seismic mass (4) flanked by two piezoelectric plates (5). This assembly is clamped rigidly by a ring (6). The parts are firmly held together without the use of any bonding agent other than friction, a principle which has proved extremely reliable in Brüel & Kjær DeltaShear® accelerometers. This assembly is hermetically welded to the titanium housing (7).

Mounting

Special effort has been put into making mounting as flexible as possible. The accelerometer housing has slots that allow the use of mounting clips so that the accelerometers can be easily fitted to a number of different test objects, or removed, for example, for calibration. UA 1407, UA 1475 and UA 1478 are sets of one hundred plastic mounting clips. UA 1564 is a set of five high-temperature mounting clips.

The mounting clips are attached to the object with glue or double-sided adhesive tape. A mounting clip with a thick base (Fig. 5) is also available and can be filed down to suit the mounting surface. A mounting clip with a swivel base (Fig. 7) is a third option. This makes it easy to align the accelerometer in order to retain the coordinate system. Spirit Level UA 1480.

**Specifications:**

- **Weight:** 0.4 gram
- **Upper limiting frequency, 10%:**
  - Type 4507 mounted with grease: 3 kHz
  - Type 4507 dry mounting: 1.5 kHz
  - Type 4508 mounted with grease: 4 kHz
  - Type 4508 dry mounting: 2 kHz

**Fig. 5**
Mounting Clip with Thick Base UA 1475

**Specifications:**

- **Weight (before shaping):** 0.7 gram
- **Upper limiting frequency, 10%:**
  - Type 4507 mounted with grease: 3 kHz
  - Type 4507 dry mounting: 1.5 kHz
  - Type 4508 mounted with grease: 4 kHz
  - Type 4508 dry mounting: 2 kHz

**Fig. 7**
Swivel Base UA 1478

**Specifications:**

- **Weight:** 0.8 gram
- **Upper limiting frequency, 10% (mounted with grease):**
  - Excited along the accelerometer’s axis of sensitivity and with mounting surface of the hemispherical part perpendicular to the direction of excitation: 2.3 kHz
  - Excited along the accelerometer’s axis of sensitivity and with mounting surface of the hemispherical part at 45° to the direction of the excitation: 1.7 kHz

**Common specifications for all plastic mounting clips:**

- **Temperature range:** −54° to +50°C (−65° to +122°F)
- **Maximum acceleration:** 10 g peak
- **Maximum acceleration (Perpendicular to mounting surface):** 70 g peak
- **Material:** Glass reinforced polycarbonate

**Fig. 9**
Spirit Level UA 1480

**Specifications:**

- **Max. dimensions:** 85 × 23 × 17 mm (3.3 × 0.9 × 0.7 in.)
- **Material:** Black anodized aluminium
Environmental Sensitivity

Some of the most troublesome environmental factors encountered when using piezoelectric accelerometers are temperature transients. By careful choice of materials, mechanical design and the shear concept, this factor has been reduced to a minimum. Special effort has also been made to minimise interference from RF (Radio Frequency) electromagnetic fields.

High humidity is another environmental factor that can influence the accuracy of piezoelectric transducers. Careful design and manufacturing have reduced this effect to a minimum for the 4507 and 4508 families. Furthermore, some members of the families (see Specifications) are equipped with hermetically sealed (glass) connectors, that make them completely independent of humidity and aggressive gas.

Calibration

Each accelerometer is individually calibrated and supplied with a comprehensive calibration chart. Long-term stability and reliability are ensured by artificial ageing during the production process. Field checking and system calibration are straightforward using Brüel & Kjær’s Handheld Vibration Calibrator Type 4294.

Subsequent Calibration

Brüel & Kjær manufactures a range of equipment for frequency response, sensitivity and system calibrations. Details of these are available in separate Product Data Sheets.

Fig. 11 Example of the calibration chart supplied with the accelerometer
DeltaTron Accelerometers

DeltaTron is a generic name for accelerometers and signal-conditioning products from Brüel & Kjær. It identifies products that operate on a constant-current power supply and give output signals in the form of voltage modulation on the power supply line. One of the advantages of this system is that it allows you to use inexpensive cables.

Accelerometers Types 4507 and 4508 can be used with all vibration setups with DeltaTron or ICP® input modules.

The built-in, low-noise preamplifiers are made using thick film technology. They comprise ASICs including a special reference voltage that ensures very stable bias voltage over the entire operating temperature range.

The low output impedance means that you can connect long cables between the accelerometer and measurement equipment.

DeltaTron Power Supply

WB 1372 is a cost-effective and reliable single-channel, battery-operated power supply for DeltaTron accelerometers. The frequency range covers the full frequency range for the accelerometers and the transducer current is 3 mA ±20%. Both input and output have BNC connectors.

Charge Accelerometers

Accelerometers Types 4507 C and 4508 C can be used in high-temperature applications up to 250°C (482°F), and the use of an external conditioning amplifier allows variable amplification for optimum signal-to-noise ratio. NEXUS™ Charge Conditioning Amplifier Type 2692 and Measuring Amplifier Type 2525 are suitable for conditioning the signal. Alternatively, Charge to DeltaTron Converter Type 2647 (with TEDS, see below) enables the accelerometers to be used with DeltaTron power supplies.

Cables and Connectors

In order to distinguish the individual accelerometers in a multichannel measurement setup, coloured cable markers (UA 1243) are available to fit both cable AC 0104 and the thicker cables AC 0005 and AC 0208.

Types 4507 and 4508 require cables with 10–32 UNF connectors. For general, non-critical use, standard Cables AO 0463 and AO 0531 are recommended (not for Type 4507 C or 4508 C) since they are very flexible and easy to install.

For Types 4507 C and 4508 C, low-noise or super low-noise cables are recommended: AO 0038, AO 0122, AO 0406 or AO 1382 (see Ordering Information for details).

Specifications:

Material:
- Base – Stainless steel (hardened)
- Spring – Stainless steel spring
Mounting surface diameter: 21 mm
Mounting thread: 10 – 32 UNF
Weight: 17 gram
Maximum Cable Length (DeltaTron only)
The maximum output voltage of a DeltaTron accelerometer when driving long cables depends on the supply current at which it is operating, and on the capacitive load due to the connecting cable.

The maximum cable length in metres (for distortion ≤1%) is given by:

\[ L = 140000 \times \frac{I_s - 1}{f \times V_o \times C_m} \]

where:
- \( I_s \) = supply current (mA)
- \( f \) = frequency (kHz)
- \( V_o \) = output voltage (V peak)
- \( C_m \) = cable capacitance (pF/m)

IEEE P1451.4 "A Smart Transducer Interface for Sensors and Actuators"

The IEEE P1451 Working Groups have been working on a uniform approach for connecting sensors and actuators to communication networks, control systems and measurement systems. IEEE P1451.4 proposes a mixed-mode smart transducer communication protocol based on existing analogue connections. It also specifies Transducer Electronic Data Sheet (TEDS) formats for interfacing analogue transducers with additional, smart features to legacy systems. The proposed interface is designed to be compatible with other P1451 network-capable transducer interfaces. The IEEE P1451.4 draft specification is subject to change until approval by the IEEE.

Characteristics

Frequency Response
The following information on frequency response is included on each accelerometer’s accompanying calibration chart (Fig. 11). However, certain accelerometers have this information built in electronically (TEDS) as well.

The upper frequency limits given in the specifications are the frequencies where the deviation from the reference sensitivity is less than 10%. It is approximately 30% of the mounted resonance frequency. This assumes that the accelerometer is correctly mounted on the test structure – a poor mounting can have a marked effect on the mounted resonance frequency.

The lower frequency limits and phase response are determined by the built-in preamplifiers. The lower frequency limits are given in the specifications for deviations from reference sensitivity of less than 10%.
Increased measurement accuracy can be achieved by dividing the actual measurement by the individual frequency response.

Frequency response curves generated from the individual TEDS values are given on the calibration chart for the major part of the frequency range. At low frequencies, the curves given are typical (Fig. 11).

The calibration chart also includes these individual TEDS values that, together with a general formula, best fit the measured frequency response. The expression can be used for frequency response compensation in the specified frequency range. The relative frequency response, including amplitude and phase, is:

\[ S_{ref}(f, T) = (\text{Sign}) \times (1 + b(T - T_{ref})) \times \frac{jf}{f_{hp}} \times \frac{1}{(1 + jf)} \times \frac{1}{(1 + jf)^2 + Qf_{res}^2} \times (\frac{f}{f_{ref}})^a \ln 10 \]

**Sign** = Polarity  
**b** = Temperature Coefficient  
**T** = Temperature  
**f** = Frequency  
**f_{hp}** = High-pass Cut-off Frequency  
**f_{lp}** = Low-pass Cut-off Frequency  
**f_{ref}** = Reference Frequency  
**Q** = Quality Factor  
**a** = Amplitude Slope/Decade

Combining this equation with the amplitude sensitivity \( S_{ref} \) and \( f_{ref} \) and \( T_{ref} \) we have:

\[ S(f, T) = S_{ref} \times \frac{S_{ref}(f, T)}{S_{ref}(f_{ref}, T_{ref})} \]

Implementation of this formula in either real-time data acquisition systems or in post-processing will support an automatic update of amplitude and/or phase.

**Triaxial Measurements**

Types 4507 B004, B005, B006 and 4507 C are equipped with three sets of mounting slots. These make it possible to perform triaxial measurements by successively mounting the accelerometer in three directions perpendicular to each other. This is easily done when the accelerometer is mounted in one of the mounting clips. However, it implies that the measurements take place on a non-variant system.

**Fig. 14**  
Example of a triaxial measurement performed by rotating Type 4507 B004 in the mounting clip
The innovative and time-saving features of Types 4507 and 4508 make them ideal for modal analysis on aircraft, trains and satellites. These applications often involve large, composite structures that require multiple measurement points. Types 4507 and 4508 excel in such situations, providing ease of handling, fast calibration and reliability. With a rugged construction, Types 4507 and 4508 can also be used in a wide range of measurement environments. They also have low sensitivity to temperature transients, which is advantageous when it comes to making measurements at low frequencies.
Compliance with Standards

C-Tick mark indicates compliance with the EMC requirements of Australia and New Zealand.

Safety
EN 61010–1 and IEC 61010–1: Safety requirements for electrical equipment for measurement, control and laboratory use.

EMC Emission
EN/IEC 61000–6–3: Generic emission standard for residential, commercial and light industrial environments.
EN/IEC 61000–6–4: Generic emission standard for industrial environments.
CISPR 22: Radio disturbance characteristics of information technology equipment. Class B Limits.

EMC Immunity
EN 50082–1: Generic immunity standard. Part 1: Residential, commercial and light industry.

Temperature
Operating Temperature:
4507, 4507 B, 4507 B 003, 4507 B 004, 4508, 4508 B and 4508 B 003: −65°C to +250°F
4507 001, 4507 B 001, 4508 001 and 4508 B 001: −10°C to +121°F
4507 002, 4507 B 002, 4507 B 005, 4507 B 006, 4508 002, 4508 B 002 and 4508 B 004: −10°C to +100°F
4507 C and 4508 C: −74°C to +250°F

a. Using NEXUS Conditioning Amplifier Type 2692
### Common Specifications 4507 and 4508 (DeltaTron only)

**DYNAMIC**

- **Mounted Resonance Frequency:**
  - 4507: 18 kHz
  - 4508: 25 kHz
- **Transverse Sensitivity:** <5% of sensitivity

**ELECTRICAL**

- **Constant Current Supply:** 2 to 20 mA
- **Supply Voltage (unloaded):**
  - +24 to +30 VDC (for full specification range)
  - Min. +18 VDC (reduced measuring range)
- **Polarity:** Positive (for an acceleration in the direction of the engraved arrows)

**ENVIRONMENTAL**

- **Max. Non-destructive Shock (±Peak):** 50 k.ms⁻²; 5000 g
- **Temp. Transient Sensitivity (3 Hz lower limiting frequency):**
  - 4507: 0.2 ms⁻²/°C
  - 4508: 0.3 ms⁻²/°C
- **Base Strain Sensitivity (mounted on adhesive tape 0.09 mm thick):** 0.005 ms⁻²/με

**Magnetic Sensitivity:** 3 ms⁻²/T

**Temperature Range:**
- 4507, 4507 001, 4507 B, 4507 B 001, 4507 B 003, 4507 B 004, 4508, 4508 001, 4508 B, 4508 B 001 and 4508 B 003:
  - −54° to +121°C (−65° to +250°F)
- 4507 002, 4507 B 002, 4507 B 005, 4507 B 006, 4508 002, 4508 B 002 and 4508 B 004:
  - −54° to +100°C (−65° to +212°F)

**PHYSICAL**

- **Case Material:** Titanium
- **Sensing Element:** Piezoelectric
- **Design Configuration:** ThetaShear
- **Connector:** 10 – 32 UNF coaxial
- **Dimensions (H x W x L):** 10 x 10 x 10 mm (0.4″), excl. connector
- **Weight:** 4.8 gram (0.17 oz.)

**Note:** All values are typical at 25°C (77°F), unless measurement uncertainty is specified. All uncertainty values are specified at 2σ (i.e., expanded uncertainty using a coverage factor of 2)
Ordering Information

Types 4507/4508 Miniature DeltaTron Accelerometers
Types 4507 B/4508 B Miniature DeltaTron TEDS Accelerometers
Types 4507 C/4508 C Miniature Charge Accelerometers

Include the following accessories:
- Carrying Box
- Individual Calibration Chart
- One Mounting Clip (not 4507 B 003 or 4508 B 003)

Optional Accessories

</tbody>
</table>

Cables AO 0038, AO 0122, AO 0463 and AO 1382 are available in other lengths with 10 – 32 UNF connectors. The following suffixes to the type numbers are used to specify the length when ordering:
- F: 3 m (10 ft) (except AO 0122)
- G: 5 m (16 ft)
- H: 10 m (33 ft)
- K: 30 m (100 ft)

Customer specified lengths:
- AO 0038V–AC 0005–x
- AO 0122V–AC 0200–x
- AO 0463V–AC 0208–x
- AO 1382V–AC 0104–x

Where “x” specifies the length in metres
- UA 1243 3 × 30 pieces of red/green/yellow cable markers for Cable AC 0064
- UA 1244 As above, for Cable AC 0005 and AC 0208
- YJ 0216 Mounting Wax
- QS 0007 Cyanoacrylate Adhesive
- WB 1372 DeltaTron Power Supply
- UA 1407 Set of 100 Mounting Clips
- DV 0459 Calibration Clip
- UA 1418 Set of 25 dummy accelerometers for mass loading
- UA 1478 Set of 100 swivel bases
- UA 1475 Set of 100 mounting clips with thick base
- UA 1564 Set of 5 high-temperature mounting clips
- JP 0192 Solder connector adaptor
- 4507–CFF Re-calibration (sensitivity)
- 4508–CFF Re-calibration (sensitivity)
